

### Professional Engineer's Certification

In accordance with §257.91(f) of the CCR Rule, I hereby certify that the groundwater monitoring systems associated with the Conemaugh Station Ash Filter Ponds and Ash/Refuse Disposal Site (CCR Units) have been designed and constructed to meet the applicable requirements of Section 257.91 of the Rule. This certification is based on a review of information made available to me, which includes historical information and data that were developed and certified by others and are therefore limited to the completeness, accuracy, and reliability of the original work performed. This certification is also based on my knowledge and understanding of accepted hydrogeological principles and in coordination with registered professional geologists that were presented with the same body of information that was made available to me. This certification acknowledges the adoption of a multiunit monitoring system [per §257.91(d)] for the Ash Filter Ponds. This certification also acknowledges that the monitoring system for the Ash/Refuse Disposal Site utilizes a minimum of one upgradient well, which has been justified by this well's ability to reflect un-impacted conditions in a hydrogeological upgradient position. The construction and orientation of the respective groundwater monitoring systems is sufficient to satisfy the performance standards outlined in §257.91(a)(1-2) of the Rule.

The CCR Rule Groundwater Monitoring Systems subject to this certification consist of the existing upgradient wells at both CCR Units (two for the Ash Filter Ponds and one for the Ash/Refuse Disposal Site) and the four downgradient wells installed in 2023 for both CCR Units.

The use of the words "certification" and/or "certify" in this document shall be interpreted and construed as a Statement of Professional Opinion and is not and shall not be interpreted or construed as a guarantee, warranty or legal opinion.
